

40ltr Blast Pots

Dimensions

Diameter – 290mm

Bowl Height – 700mm
(this does not include the height of the lid & Screen)

Our range of Pressure Blast Pots provide every feature needed to improve and maintain productivity. Start with the urethane pop-up filler valve; it helps you reload abrasive in less time, automatically, larger diameter plumbing ensures fast pressurization and greater airflow with minimum pressure loss.

Atomic feed valve accurately metres consistent abrasive feed reducing consumption. Other outstanding features include large top access opening makes internal hopper maintenance easy.

Safe Stop Dead Man control system ensures operator safety and fast trouble free blasting. Occupational Health and Safety approved pressure vessel, manufactured, tested and registered in accordance with Australian Standards, in Australia. Large pneumatic rubber wheels and handle enable safe easy portability.

Fully equipped packages assure you matched components for excellent and economical production. Syntech recognizes that blasting requirements vary, so we offer a wide range of packages designed for light duty, intermediate and high production applications.

Safety All Blast machines are design to be used with safe stop systems, the systems conform to Work Cover requirements and enable faster safer blast cleaning thereby improving overall job productivity
