

Breathing Kits

Compressed Breathing Air must be pure, it cannot have any toxic or irritation ingredients and it must have no odour. To accomplish this you need to have a "Breathing Air Filter" something that is going to purify the air so you don't breathe in dirt, oil mist and vapour or water condensate, plus you don't come across any odour or taste.

We have available two Options for you;

Option One

Two Man Breathing Kit

Ordering Code: HEL-YA18022

This model is mounted onto the wall inside your Blasting room, it is an industrial grade combination of high efficiency and activated carbon filters plus a pressure regulator that will purify and regulate compressed air to produce high quality breathing air. The body and housing are diecast aluminium with chromate treatment. The housings are diecast aluminium with chromate treatment. The housings are dynamically designed to eliminate re-entrainment and are coated internally.

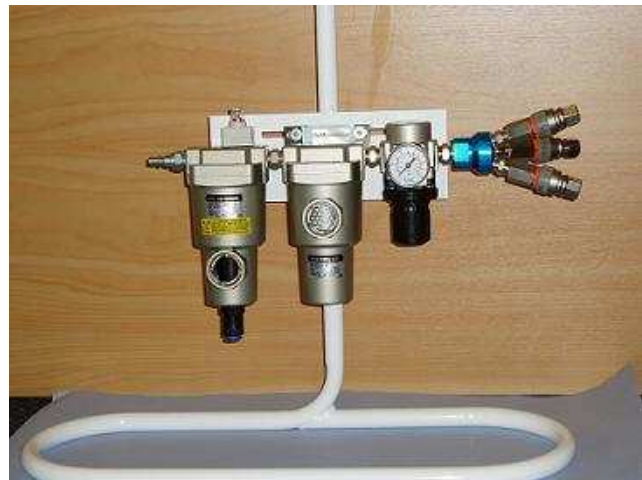

Note: Both these Units can be supplied with 20 Metre Leads to Helmet with a Quick release coupling at Extra cost of Wall Mounting

Option Two

Two Man Carry Handle Model

Order Code: HEL-YA18023

This portable model moves, as you need it to, it is an industrial grade combination of high efficiency and activated carbon filters plus a pressure regulator that will purify and regulate compressed air to produce high quality breathing air. The body and housing are diecast aluminium with chromate treatment. The housings are diecast aluminium with chromate treatment. The housings are dynamically designed to eliminate re-entrainment and are coated internally.

These can be supplied as a three man Kit, However you have to ask for this specifically.
