

WALNUT

PRODUCT DESCRIPTION

Walnut Shell is a vegetable abrasive. Made from the crushed shells of walnuts.

SAFETY

- Non-toxic and biodegradable
- Dust Free
- Natural product

USES

Ground Walnut shell is a medium abrasive use to polish clean, metals, fiberglass, stone, wood and plastics. Walnut shell is also effective at deburring product from mouldings, castings and electrical parts.

Walnut shell can be used in barrel tumbling operations to clean and Polish. The painting industry uses it for surface preparation before painting.

You will find walnut in cosmetics, soaps, dental products, health preparations and cleansers. Rough surfaces on skin and teeth can easily removed by its gritty texture.

Walnut shell is often used a filler for such things as gun cartridges or the plastics industry. Dynamite shelling is another area where walnut is used as a filler

It can be used in the oil industry for the recovery of oil spill operations and oil drilling operations.

Its main use though is in the automotive and aircraft industries where it is suitable for specialty blasting

- Cleans without leaving scratches or pitting
- Cleans precision parts
- Cleaned parts require no additional machining
- Easy to use
- Biodegradable
- Fast clean up after use

Coarse Walnut shell sizing is 1.9 to 3.0mm

Medium walnut shell sizing is 1.6 to 1.9mm.

It is packed in convenient 25kg bags and is crushed locally.
