Vapormatt | Puma

Fitted with the Vapormatt MK3 10mm Blast gun, air blow-off nozzle and a recirculated water system with a diaphragm pump.

For further information contact:

Ergonomically designed with a working envelope of W1150xD700xH1200mm and powered by 1.1kW pump. A rugged construction from a 2mm stainless steel cabinet and 3mm stainless steel sump make the Vapormatt | Puma a diverse manual wet blasting system that's designed for heavy and economical use.

A front loading swing door (with safety lock) allows the operator easy access to the swing arm jig to assist with loading and unloading, the jig features a 48mm shaft over which a wheel can be located, the back of the wheel rests up against x4 round bars and is free to rotate around the central shaft which inclines backwards.
